Vishwa R

Frappe / ERPNext Engineer

Chennai, India | +91 6382741676 | vishwaravi321@gmail.com | github.com/vishwaravi321 | linkedin.com/in/vishwa-ravichandran

SUMMARY

Frappe and ERPNext engineer with 3+ years building and running production ERPNext systems, from custom apps and server-side business logic to Bench deployment and production support on Linux. I work mainly on the backend: business logic, data correctness, API design, and performance, not UI. A solid infrastructure background in Ansible, Docker and MariaDB lets me own Frappe systems from code through to deployment. Recent work is in the fleet and finance space, including invoicing and revenue, fuel-cost reconciliation, KYC verification, and AI-assisted operations built on Anthropic Claude and Sarvam AI.

EXPERIENCE

Tech Lead (Senior Engineer, Technical Owner), Liqui-Connect Fintech Solutions **Oct 2025 - Present**

Chennai, India

- Designed and delivered 10+ ERPNext and Frappe modules for a fleet of 500+ buses, covering finance, compliance and operational automation.
- Owned architecture, solution design and production deployment for these modules, working directly with customers and mentoring interns.
- Built the Fuel Intelligence module that correlates BPCL SmartFleet fuel-card data with telematics to flag suspected fuel theft; it runs in production and is used by customers.
- Engineered a Vehicle Invoice and revenue system on ERPNext Accounts, covering fuel, AdBlue and FASTag expenses, bus-booking revenue, and automated trip-sheet to income postings for per-vehicle P&L.
- Designed a multi-channel notification platform for Email, WhatsApp and Voice alerts, then built FASTag low-balance alerts on it. Made it multi-tenant with per-use-case gating and message logging.
- Built REST API and webhook integrations to external systems including BPCL SmartFleet, HDFC FASTag, Surepass KYC and Exotel, with per-feature kill-switches and retry handling.
- Added a second telematics provider behind a provider-agnostic connector, keeping the existing Intangles integration compatible.
- Built an AI assistant layer using an MCP server that exposes around 40 read-only fleet tools to Anthropic Claude for natural-language queries.
- Developed a multilingual voice system for driver checklist and query calls, plus a pilot FastAPI and WebSocket voice assistant for complaint and ticket handling.

Tech: ERPNext/Frappe • Python • MariaDB • REST APIs • Docker • FastAPI • Redis • Linux

Frappe / ERPNext Developer, Hyper Ready Technologies **Feb 2025 - Sept 2025**

Coimbatore, India

- Built and extended a multi-module custom Frappe and ERPNext application for a jewellery brand, working mainly on backend business logic and performance.
- Designed backend REST APIs powering a jewellery e-commerce storefront and a Multi-SKU product catalog, mapping ERPNext item and inventory data to the frontend.
- Connected ClickPost shipping and a third-party inventory system to ERPNext over REST APIs and webhooks, syncing orders, stock and fulfilment status.
- Developed custom Script and Query Reports for sales, stock, costing and revenue analysis, encoding the complex business logic the finance and inventory teams needed.
- Wrote server-side validations and business logic in Python on Frappe that cut a recurring class of data-entry errors.

Tech: ERPNext/Frappe • Python • MariaDB • REST APIs • JavaScript • Git • Linux

Site Reliability Engineer, Nxweb **Dec 2022 - Dec 2024**

Coimbatore, India

- Sole infrastructure and reliability engineer for 60+ ERPNext production environments on Hetzner and DigitalOcean, owning Bench deployment, zero-data-loss version upgrades, monitoring, security and backups.
- Built a variable-driven ERPNext deployment framework in Ansible that installs a full Bench and ERPNext stack with no manual steps, cutting environment setup from hours to about 30 minutes.
- Built a self-service tenant provisioning pipeline for a billing ERPNext product, where signup triggers automated site creation via Ansible, DNS and SSL setup, and credential delivery over WhatsApp.
- Extended Frappe's WhatsApp Business integration with template-based messaging, building the template DocTypes, an API-driven send flow and a WhatsApp channel in Frappe Notifications, later offered to clients as an add-on.
- Built a submit-hook B2B e-invoice integration with TAFE that transmits invoice and e-invoice PDFs on document submit, with cancellation handling and retry logic.
- Integrated biometric attendance devices (ZKTeco, Hikvision) and geofenced check-in via Google Location APIs into ERPNext HRMS, and contributed modules to a construction-focused ERPNext product.
- Designed the monitoring stack on Prometheus and Grafana, automated off-site backups with a custom Frappe app, and remediated production security incidents while hardening the fleet.

Tech: Ansible • ERPNext/Frappe • Python • Docker • MariaDB • Prometheus • Nginx • Linux

SKILLS

ERPNext & Frappe: Custom Apps, DocTypes, Server-Side Scripting, Workflows, Reports (Script & Query), Print Formats, Notifications, Bench

Core: Python, REST APIs, MariaDB, MySQL, Redis, Linux, Git

Web (Frappe): JavaScript, HTML, CSS, Jinja

Integrations: Webhooks, third-party system integrations across payments, logistics, telematics, KYC, messaging and biometric devices

Infrastructure & DevOps: Docker, Ansible, Terraform, CI/CD (GitHub Actions), Nginx, AWS

AI & Services: Anthropic Claude (MCP), Sarvam AI, FastAPI, WebSockets

Practices: Performance optimization, production support, requirement gathering, code review, mentoring

EDUCATION

B.Sc in Computer Science **2018 - 2021**

Sree Sevugan Annamalai College
